

MPH FLEXOGRAPHIC

Reprographic and plate making specialists for the Flexographic industry

JUNE 2014 NEWSLETTER

NEW HI-RES DIGITAL LETTERPRESS

Photopolymer technology has moved on significantly in the last fifteen years, led by flexographic printing. The knock on benefit for letterpress printers? What was once a very manual process;

producing a film negative, exposing a plate and washing it out is now very much more streamlined and error free.

MPH Limited has invested in high resolution laser imagers that etch directly onto the latest photopolymer letterpress plate. Jobs that were once simply not viable for a letterpress press are being printed regularly by one of the longest serving processes in the print industry.

development whereby suitably hardened photopolymer letterpress male and female plates are mounted as an alternative to an expensive metal die. Your client's design is processed by us into a set

Contact us for low cost quote.

EMBOSSING ON FLEXO UNITS is becoming increasingly more popular for flexo printers. A recent

of interlocking plates complete with special bearers.
